

HARRIS 2026
CABINETRY

ABOUT US

At Harris Cabinetry, we believe exceptional design is built on care, intention, and craftsmanship that endures. With a team grounded in expertise and care, our family-owned business creates cabinetry that balances beauty with function—pieces designed to live well, work hard, and stand the test of time.

Crafted locally using high-quality materials and time-honored techniques refined through modern innovation, our work reflects a deep attention to detail. From thoughtful design to precise construction, we take pride in creating cabinetry defined by integrity, quality, and lasting value.

Greyed abbreviations indicate unavailable wood species.

** Oak is available in rift sawn and quarter sawn cuts. White oak is available upon request.*

Wood Species

Alder

Distinct hardwood species selected for appearance, performance, and longevity.

Maple

Smooth and consistent in appearance, maple features a tight, uniform grain and excellent stability. Its restrained character makes it well suited for contemporary designs and lighter finishes.

Hardness: 4 Stability: 4 Grain Character: 2

Hickory

One of the hardest domestic hardwoods, hickory displays bold contrast and pronounced grain variation. Natural inconsistencies and movement contribute to its distinctive, expressive character.

Hardness: 5 Stability: 2 Grain Character: 5

Cherry

Cherry offers a smooth texture with moderate grain variation and a warm natural tone. Over time, exposure to light deepens its color, developing a rich, classic patina.

Hardness: 3 Stability: 3 Grain Character: 3

Walnut

Walnut is prized for its rich natural color and flowing grain patterns. Subtle chatoyancy may be present, creating depth and visual movement as light changes across the surface.

Hardness: 3 Stability: 3 Grain Character: 4

Alder

Alder features a fine, even grain that accepts stain evenly and predictably. Its balanced appearance and stability make it a versatile choice across a wide range of styles.

Hardness: 2 Stability: 4 Grain Character: 2

Quarter Sawn Oak

Oak cut perpendicular to the growth rings, resulting in exceptional dimensional stability and a straight grain pattern. Visible medullary ray fleck may be present, adding texture and visual depth while maintaining long-term performance.

Hardness: 4 Stability: 5 Grain Character: 4

Rift Sawn Oak

Oak cut at a consistent angle to the growth rings to produce a clean, linear grain with minimal variation. Rift sawn oak offers a refined, modern appearance with controlled movement and uniform visual character.

Hardness: 4 Stability: 4 Grain Character: 2

Grain patterns shown are representative; natural variation will occur.

See the Difference

Purposeful design from the inside out.

Cabinet Construction & Materials

3/4" Plywood Cabinet Construction

Full-depth plywood cabinet boxes provide superior strength and durability compared to particle board or MDF alternatives. Standard on framed and inset cabinetry.

Integrated End Panels (IEP)

Flush, furniture-grade end panels are integrated into the cabinet design, eliminating applied panels and delivering a seamless finished appearance.

Finished Cabinet Bottoms

Cabinet bottoms are finished to match the interior, ensuring a polished look in open or highly visible installations.

Extended Top Rails

Extended top rails enhance structural rigidity and simplify installation without the need for additional carrier molding.

Drawers & Hardware

Hand-Sanded Dovetail Drawer Construction

Traditional dovetail joinery delivers exceptional strength and long-term durability beyond basic construction methods.

5 1/8" Deep Drawer Boxes

Extra-deep drawer boxes maximize usable storage space and exceed standard industry depths.

Blum® Soft-Close Hardware

Premium soft-close hinges and full-extension drawer guides feature all-metal construction for smooth, quiet operation and long-lasting performance.

Precision Engineering & Fit

Precision Sizing (Within 1/16")

Components are manufactured to tight tolerances, supporting consistent alignment, clean reveals, and a refined finished appearance.

OptiFit™ Appliance Integration

Cabinetry is designed around appliance specifications to achieve a precise fit, reducing fillers and ensuring a seamless, built-in look.

Pre-Assembled Custom Units

Custom cabinetry elements are constructed as unified pieces for a refined, cohesive finished look.
